

Vignettes Project

In this project you will create vignettes from the images provided. These images are going to be placed on web pages that have a colored background.

Tip: Follow the handout on Vignettes to complete this assignment.

Experiment with BOTH the rectangular and elliptical marquee. Experiment with various values of feather. Be sure to crop unused areas after you create your vignette. Your completed assignment should contain images that have a variety of vignettes applied.

The following images will appear on vignettes_1.html. This page has a background color of #CC7033.

weiner_dogs.jpg, lazy_dog.jpg, begal.jpg, moo_cow.jpg

The following images will appear on vignettes_2.html. This page has a background color of #59A2C8.

baseball_player.jpg, graduate.jpg, model.jpg, women.jpg

The following images will appear on vignettes_3.html. Because you do not know the background color, these images must maintain transparency.

eagle.psd, flowers.jpg, tomatoes.jpg, tulip.jpg

When completed with each image you will need to optimize and scale. Scale each image so that the largest dimension is **no greater than 300 pixels**. Optimize each image for web in the appropriate file format and compression quality. Place all images in the images folder and add the images to the corresponding web page.

Place all completed, optimized images in a folder entitled "vignettes". Zip compress this folder and upload to this assignment on blackboard.
